

CT-5801 | Bus Terminal Module

Internal-bus terminator / end module

The ODOT CT-5801 is the C-Series bus terminal (end) module. Exactly one is fitted at the end of each adapter's module string to stabilise internal-bus communication and to cover the exposed internal-bus and field-power contacts of the last I/O module. It carries no process data and no configuration parameters, occupies no I/O channel, and supersedes the earlier CT-5800.

General / Identification

Brand / Series	ODOT, C-Series Remote I/O
Module type	Bus terminal / end module
Function	Terminates internal bus; covers last module's bus & field-power contacts
Process data / configuration	None
Quantity rule	1 per network adapter, regardless of module count
Supersedes	CT-5800

Mechanical & Environmental

Mounting	35 mm DIN-rail
Protection class	IP20

Compliance

Certifications	CE; ISO 9001 (manufacturer-stated)
----------------	------------------------------------

Typical applications: Terminating an ODOT C-Series remote I/O rack; protecting the last module's bus contacts.

Specifications are taken from the manufacturer's published data and are subject to change without notice. Confirm against the current manufacturer manual before rated or safety-critical use.
